

## Introduction

Draw the following shapes on paper and cut them out along the boundary.

Fold each figure along the dotted line. What do you observe?

Clearly, the parts lie exactly one above the other as **shown** below.

Now, stick the folded parts together. Place each piece on the table and then place a mirror along the dotted line:

Look into the mirror. What do you observe?

Clearly, the figure inside and outside the mirror are the same and the two together form a complete shape we had made above.

Such figures which can be divided into two exactly identical parts are said to be symmetrical about the dividing line.

## Exercise 66

1. Look at the pictures given below. Does the dotted line divide each picture into two similar halves?

2. Using a dotted line, can you divide the following pictures into two similar halves?

3. Complete each of the following pictures by drawing an exactly same pattern on the other side of the line.

(a)

(b)

(c)

(d)

(e)

(f)

4. Guess each of the following words by looking at their halves.

(a)

(b)

(c)

(d)

(e)

(f)

5. Observe the rangoli designs given below. Are they symmetrical? Draw lines in the designs that divide them into two identical halves.

(a)

(b)

(c)

(d)

(e)

(f)

6. Complete the symmetrical patterns given below:

(a)

(b)

(c)

(d)

(e)

(f)

## Activity Time

Prepare a chart of English capital letters (A to Z) and numerals from 0 to 9. Try dividing each letter and numeral into two similar mirror halves by drawing a line. Tick (✓) the character which can be divided into two identical halves and cross (✗) the ones which cannot.

Consider the following examples.
